

EMAIL APPLICATION

A login form or login page is the core functionality of any application. It is usually used to check the authenticity of the user. If the user gives the valid username and password. then he/she can log into the system otherwise the system will deny accepting the user's login request. To create our Gui Login Form or Login Page in Java Swing.

Users:

- user

Functional requirements:

user:

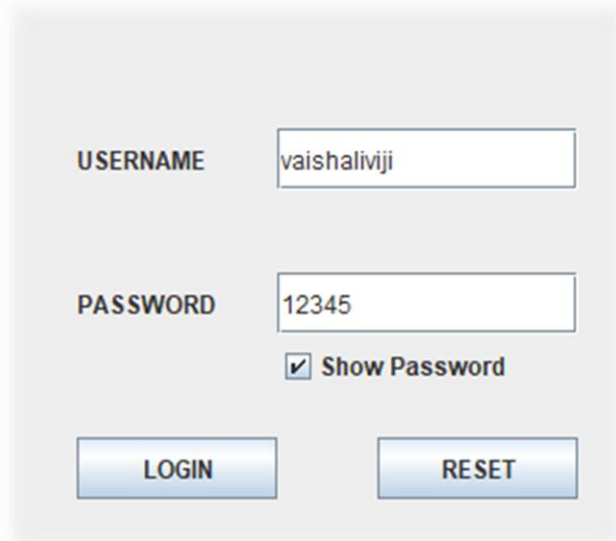

- Login
- Reset

Tools to be used:

- Front End: Java Swing
